

Bull Flags

Forms when price moves up quickly and then pauses for a short duration before continuing its upwards journey.

Strong buying pressure takes the price higher forming a **Flagpole**.

Price consolidates in a narrow, downward-sloping or sideways channel on lower volume, thereby forming a **Flag**, indicating a temporary pause.

Pattern is confirmed when price **breaks out** above the upper trendline of the Flag with increased volume, suggesting continuation of the upward momentum.

How to Find?

- Use **readymade filter** in Pro-Setups Dashboard to identify stocks that are making Bull Flag setups.

Flag: Consolidation in a parallel channel
